

Know someone who stutters?

UCSF is recruiting adults to
better understand speech
fluency and brain activity

Recruiting adults who do or do not stutter:

Participation involves:

- 2-3 MEG sessions at UCSF Parnassus (non-invasive brain imaging)
- 1 MRI session at UCSF Mission Bay
- A single low dose of aripiprazole (FDA approved) administered during one session
- Speech and language tasks while brain activity is recorded

You may be eligible if you:

- Are 18 – 64 years old
- Are a Native English speaker
- Either stutter or do not stutter
- Generally healthy and able to participate in brain imaging sessions

Participants will be compensated for their time and parking costs will be reimbursed.
